Laboratory Report

Laboratory #:	337951	Call Name:	Nala		
Order #:	172931	Registered Name:	WyoDG Miss Sunshine Nala Say		
Ordered By:	Madison Macdonald	Breed:	Miniature Longhaired Dachshund		
Ordered:	Dec. 23, 2022	Sex:	Female		
Received:	Jan. 3, 2023	DOB:	March 2022		
Reported:	Jan. 16, 2023	Registration #:	HP64821603		
-		Microchip #:	956000014222982		

Results:

Disease	Gene	Genotype	Interpretation
Chondrodystrophy with Intervertebral Disc Disease Risk Factor (CDDY with IVDD)	CFA12 FGF4	M/M	Increased IVDD Risk Associated with CDDY
Mucopolysaccharidosis IIIA (Dachshund Type)	SGSH	WT/WT	Normal (clear)
Narcolepsy (Dachshund Type)	HCRTR2	WT/WT	Normal (clear)
Neuronal Ceroid Lipofuscinosis 1	PPT1	WT/WT	Normal (clear)
Neuronal Ceroid Lipofuscinosis 2	TPP1	WT/WT	Normal (clear)
Osteogenesis Imperfecta (Dachshund Type)	SERPINH1	WT/WT	Normal (clear)
Progressive Retinal Atrophy (Giant Schnauzer Type)	NECAP1	WT/WT	Normal (clear)
Progressive Retinal Atrophy, Cone-Rod Dystrophy	NPHP4	WT/WT	Normal (clear)
Progressive Retinal Atrophy, Cone-Rod Dystrophy 4	RPGRIP1	WT/WT	Normal (clear)

WT, wild type (normal); M, mutant; Y, Y chromosome (male)

Interpretation:

Molecular genetic analysis was performed for nine specific mutations reported to be associated with disease in dogs. We identified two normal copies of the DNA sequences in eight of the mutations tested. Thus, this dog is not at an increased risk for the diseases associated with these eight mutations. However, we identified two mutant copies of the DNA sequences for *CFA12 FGF4* associated with CDDY and IVDD risk. Thus, this dog is affected with CDDY and is at increased risk of developing an early-onset form of IVDD known as Hansen's Type I IVDD.

Recommendations:

Chondrodystrophy with an increased risk to develop early-onset Intervertebral Disc Disease (CDDY and IVDD Risk) is inherited in an autosomal dominant fashion. Dogs which inherit one or two copies of the associated *FGF4* mutation in chromosome 12 (*CFA12 FGF4*) display CDDY, which is defined as shortening of long bones in the limbs and premature degeneration and calcification of intervertebral discs. Based on this and the fact that this dog has inherited two copies of this mutation, this dog is affected with CDDY and is at increased risk of developing an early-onset form of IVDD known as Hansen's Type I IVDD. However, IVDD associated with this mutation displays incomplete penetrance, meaning that even though dogs with the mutation display premature degradation of intervertebral discs, not every dog with this mutation will develop clinical signs of IVDD. Hansen's Type I IVDD is marked by herniation of intervertebral disc material compressing the spinal cord causing a variety of clinical signs like severe pain (secondary to acute inflammation and hemorrhage in the spinal canal), neurological dysfunction of variable severity and possible permanent paralysis. Dogs related to this dog have an increased risk to be

affected by or carry the mutated gene. Additional testing for this mutation is indicated for related dogs.

Paw Print Genetics[®] has genetic counseling available to you at no additional charge to answer any questions about these test results, their implications and potential outcomes in breeding this dog.

Paw Print Genetics® performed the tests listed on this dog. The genes/diseases reported here were selected by the client. Normal results do not exclude inherited mutations not tested in these or other genes that may cause medical problems or may be passed on to offspring. The results included in this report relate only to the items tested using the sample provided. These tests were developed and their performance determined by Paw Print Genetics. This laboratory has established and verified the test(s)' accuracy and precision with >99.9% sensitivity and specificity. The presence of mosaicism may not be detected by this test. Non-paternity may lead to unexpected results. This is not a breed identification test. Because all tests performed are DNA-based, rare genomic variations may interfere with the performance of some tests producing false results. If you think any results are in error, please contact the laboratory immediately for further evaluation. In the event of a valid dispute of results claim, Paw Print Genetics will do its best to resolve such a claim to the customer's satisfaction. If no resolution is possible after investigation by Paw Print Genetics with the cooperation of the customer, the extent of the customer's sole remedy is a refund of the fee paid. In no event shall Paw Print Genetics be liable for indirect, consequential or incidental damages of any kind. Any claim must be asserted within 60 days of the report of the test results.
